

The Battle of Neighborhoods: Buenos Aires data – Airbnb

Author: Máximo La Pietra –
maximo.lapietra@ing.austral.edu.ar

Introduction/Business Understanding:

- How should a new businessperson decide where to open a particular accommodation?

- What factors should he look at before investing?

- Which neighborhood venues affect a user's rating for location of hostel?

Important Questions

- - 1) What is the determining factor / price of a publication?
- - 2) What is the percentage of occupation of the apartments?
- - 3) What is the average income of a host at AirBnB in Buenos Aires?
- - 4) Is there seasonality in reviews?
- - 5) Which neighborhood / neighborhoods dominate the AirBnB platform in BsAs?
- - 6) How does proximity to transportation affect hostel rating?

Target Audience

This project will be useful for two groups of audience:

1. Travelers: Help them make an informed decision while choosing a accommodation by providing an in-depth analysis of hostels and their neighborhood.

2. Businessperson: Provide useful information and models which can help them where to open their first/next business related to tourism and hosting travelers.

Data Requirements

- 1. [Airbnb Buenos Aires listings] (<http://insideairbnb.com/get-the-data.html>): This dataset was downloaded from the Airbnb webpage. This is the core dataset with which I'll work.
- 2. [Airbnb Buenos Aires reviews] (<http://insideairbnb.com/get-the-data.html>): Also, from the Airbnb webpage, in order to analyze the reviews in Buenos Aires.
- 3. [Foursquare API] (<https://developer.foursquare.com/docs/api>): This API will help me get the venues around the hostel which I will use for EDA and clustering.
- 4. [BuenosAiresNeighborhoods] (<http://cdn.buenosaires.gov.ar/datosabiertos/datasets/barrios/barrios.geojson>): This geojson file will help me get the location of the neighborhoods which I will use for EDA and clustering.

Conclusion

The price of a post is higher in Palermo, Puerto Madero and Recoleta.

Palermo has the widest offer of accommodations, and venues nearby.

Hotel rooms are the most expensive places to stay.

Being a SuperHost is a simple way of increasing profits.

- 
- The starting price of hostels does not vary much depending on its distance from the city center.
 - We can group Buenos Aires neighborhoods into 6 clusters.
 - Cafes and Argentinian Restaurants are the most common venues (in clusters 2 and 3 especially).
 - There is seasonality in Argentina: peaks of tourism in March, July and November.
 - 1666 Usd is the approximate annual income for most of the posts in Airbnb.
-
